

Gebregziabher, Keffyalew. 2012. The Alienable-Inalienable Asymmetry: Evidence from Tigrinya. In the *Proceedings of the 42nd ACAL*, 161–182.

Lecture 10

October 4, 2023

1 Introduction

Recall that Tigrinya has various means by which possession can be expressed in the nominal domain:

- | | |
|---|---|
| <p>(1) <i>Prepositional Possessor Construction</i></p> <p>a. naj tɛsfaj mɛts'haf
of Tesfay book
'book of Tesfay'</p> <p>b. naj joni gəza
of John house
'house of John'</p> | <p>(2) <i>Post-Nominal Possessor Construction</i></p> <p>a. wəddi-t-i məmhir
son-that-MS teacher
'the teacher's son'</p> <p>b. ʕarki joni
friend John
'John's friend'</p> |
| <p>(3) <i>"Possessive Pronoun" Construction</i></p> <p>a. nat-u mɛts'haf
POSS-3MS book
'his book'</p> <p>b. ʔit-i nat-a mɛts'haf
that-MS POSS-3FS book
'the book of hers'</p> | <p>(4) <i>Suffixal Possessor Construction</i></p> <p>a. mɛts'haf-u
book-POSS.3MS
'his book'</p> <p>b. mɛts'haf-əj
book-POSS.1S
'my book'</p> |

Gebregziabher (2012, 2013) is interested in demonstrating that the possessive strategies in (1) and (2) are derived via two independent syntactic structures.

The proposal presented in Gebregziabher 2012, which is refined and further articulated in Gebregziabher 2013:ch.3,4, is as follows:

- (3) a. [_{DP} ʔit-i [_{FP} [_{PP} naj-t-i məmhir] [_{NP} mɛts'haf]]]
that-MS NAJ-that-MS teacher book
'the book of the teacher' (Alienable Possession)
- b. [_{DP} ʔit-a [_{NP} hafti [_{DP} ʔit-i məmhir]]]
that-FS sister that-MS teacher
'the teacher's sister' (Inalienable Possession)

This is as opposed to a derivational approach to possessive constructions, as illustrated for English:

- (4) a. [DP the [NP daughter [PP of Regina]]]
 b. [DP [DP Regina] 's [NP daughter [PP of Regina]]]
- 

2 ALP and IAP Asymmetries in Tigrinya

Gebregziabher (2012) presets a series of arguments that alienable and inalienable possessors are introduced by way of distinct syntactic representations.

2.1 Frame Availability

Gebregziabher (2012) notes that:

- the prepositional construction is primarily used for alienable possession and
- the post-nominal construction is primarily used for inalienable possession.

- | | |
|--|--|
| <p>(5) <i>Prepositional Possessor (PP) Construction</i></p> <p>a. naj-t-i məmhir məts'haf
 NAJ-that-MS teacher book
 'the teacher's book'</p> <p>b. *naj-t-i məmhir wəddi
 NAJ-that-MS teacher book
 'the teacher's son'</p> | <p>(6) <i>Post-Nominal (PN) Possessor Construction</i></p> <p>a. *məts'haf-t-i məmhir
 book-that-MS teacher
 'the teacher's book'</p> <p>b. wəddi-t-i məmhir
 son-that-MS teacher
 'the teacher's son'</p> |
|--|--|

This makes Tigrinya one of the few languages in which alienability may be encoded structurally (cf. Kifle 2011).

2.2 Possessor Predicates

Gebregziabher (2012) notes that:

- alienable possessors in the prepositional frame can be copular predicates but
- inalienable possessors in the post-nominal frame cannot be copular predicates.

- | | |
|--|--------------------------|
| <p>(7) ʔiz-i məts'haf naj-t-i məmhir ʔijj-u
 this-MS book NAJ-that-MS teacher BE-S3MS
 'This book is the teacher's.'</p> | <p>(PP; Alienable)</p> |
| <p>(8) *ʔiz-i wədi ʔit-i məmhir ʔijj-u
 this-MS book NAJ-that-MS teacher BE-S3MS
 'This son is the teacher's.'</p> | <p>(PN; Inalienable)</p> |

This suggests that the two types of possessors and their frames must be syntactically differentiated.

2.3 Order of Possessor and Modifiers

Gebregziabher (2012) observes that the different possessor frames are subject to different ordering requirements within their host DP.

Adjectives. Gebregziabher (2012) notes that:

- alienable possessors in the prepositional frame can precede or follow an adjective but
- inalienable possessors in the post-nominal frame must follow an adjective.

- (9) a. ?it-i [PP naj-t-i məmhir] [AP ?abiji] məts'haf
that-MS NAJ-that-MS teacher big.MS book
'the teacher's big book' (PP; Alienable)
- b. ?it-i [AP ?abiji] [PP naj-t-i məmhir] məts'haf
that-MS big.MS NAJ-that-MS teacher book
'the teacher's big book' (PP; Alienable)
- (10) a. ?it-i [AP ?abiji] [NP wədd-t-i məmhir]
that-MS big.MS son-that-MS teacher
'the teacher's big son' (PN; Inalienable)
- b. *?it-i [NP wədd-t-i məmhir] [AP ?abiji]
that-MS son-that-MS teacher big.MS
'the teacher's big son' (PN; Inalienable)
- c. *?it-i [NP wədd-t-i] [AP ?abiji] məmhir
that-MS son-that-MS big.MS teacher
'the teacher's big son' (PN; Inalienable)

Relative Clauses. Gebregziabher (2012) notes that:

- alienable possessors in the prepositional frame can precede or follow a relative clause but
- inalienable possessors in the post-nominal frame must follow a relative clause.

- (11) a. [CP joni zi-fətw-o] [PP naj-t-i məmhir] məts'haf
John REL-PRF.like-O3MS NAJ-that-MS teacher book
'the teacher's book that John liked' (PP; Alienable)
- b. [PP naj-t-i məmhir]₁ [CP joni zi-fətw-o] t₁ məts'haf
NAJ-that-MS teacher John REL-PRF.like-O3MS book
'the teacher's book that John liked' (PP; Alienable)

- (12) a. $[_{CP} \text{joni } \text{zi-fətw-a}] [_{NP} \text{g}^{\text{wal}} [_{DP} \text{ʔit-i } \text{məmhɪr}]]$
 John REL-PRF.like-O3FS daughter that-MS teacher
 ‘the teacher’s daughter who John liked’ (PN; *Inalienable*)
- b. $*[_{NP} \text{g}^{\text{wal}} [_{DP} \text{ʔit-i } \text{məmhɪr}]]_1 [_{CP} \text{joni } \text{zi-fətw-a}] t_1$
 daughter that-MS teacher John REL-PRF.like-O3FS
 ‘the teacher’s daughter who John liked’ (PN; *Inalienable*)
- c. $*[_{NP} \text{g}^{\text{wal}} t_1]_2 [_{CP} \text{joni } \text{zi-fətw-a}] [_{DP} \text{ʔit-i } \text{məmhɪr}]_1 t_2$
 daughter John REL-PRF.like-O3FS that-MS teacher
 ‘the teacher’s daughter who John liked’ (PN; *Inalienable*)

These observations reveal that the alienable possessor of the prepositional frame is freely orderable with respect to modifiers while the inalienable possessor of the post-nominal frame is not.

This suggests that the two types of possessor frames are syntactically encoded in different ways.

2.4 Ellipsis

Gebregziabher (2012) notes that:

- alienable possessee in the prepositional frame can be elided but
- inalienable possessee in the post-nominal frame cannot be elided.

- (13) $[[\text{naj-hagos}] \text{məts}^{\text{həf}}] \text{ʔanbɪb-ə-jjo} [[\text{naj-joni}] \text{məts}^{\text{həf}}] \text{gɪnna}$
 NAJ-Hagos book read.GER-S1S-O3MS NAJ-John book but
 ʔajə-nbəb-ku-wwə-n
 NEG-read.PFV-S1S-O3MS-NEG
 ‘I have read Hagos’s book, but I haven’t read John’s ~~book~~.’ (PP; *Alienable*)
- (14) $*[\text{hafti} [\text{hagos}]] \text{rəxib-ə-jja} [\text{hafti} [\text{joni}]] \text{gɪnna} \text{ʔaj-rəxəb-ku-wwə-n}$
 sister Hagos find.GER-S1S-O3MS sister John but NEG-find.PFV-S1S-O3MS-NEG
 ‘I have met Hagos’s sister, but I haven’t met John’s ~~sister~~.’ (PN; *Inalienable*)

This suggests that the two types of possessors and their frames must be syntactically differentiated.

3 The Analysis

Gebregziabher (2012) proposes that the differences above can be understood as symptoms of the two different syntactic representations that are responsible for each type of possession.

The primary theoretical claims are that:

- **Adjuncts** : Inalienable possessors in the prepositional frame are modifiers of the head noun and
- **Complement** : Alienable possessors in the post-nominal frame are arguments of the head noun

(15) a. [DP ʔit-i [FP [PP nəj-t-i məmhɪr] [NP mətʰəf]]]
that-MS NAJ-that-MS teacher book
‘the book of the teacher’ (PP; Alienable; Adjunct)

- **Inalienability** : Their syntactic selection by the head ensures their semantic dependency.
- **Predication** : Their syntactic selection by the head permits them to appear in predication relationships.
- **Strict Word Order** : Their syntactic selection by the head ensures their resistance to re-ordering.
- **No NP-Ellipsis** : Only the NP-complement of a genitive D can be elided, which necessarily results in deletion of the possessor N^0 .

5

3.2 Pre-nominal Prepositional Possessors are Adjuncts

Gebregziabher (2012) argues that the properties of prepositional possessors can be understood given their role as adjuncts:

- **Alienability**: Their syntactic independence from the head reflects their semantic independence.
- **Non-predication**: Their syntactic independence from the head prevents them from being in predication relationships.
- **Free Word Order**: Their status as adjuncts reflects their ability to be re-ordered.
- **NP-Ellipsis**: The NP-complement of genitive D can be elided stranding the PP

This is a position that is refined in Gebregziabher 2013:ch.3 where the prepositional frame is reanalyzed as a Linker configuration (den Dikken 2006).

The element [naɟ] is a nominal copula that creates a predication relationship between the head and the possessor.

4 Back to the Suffixes

It is not obvious to me that the facts regarding the suffixal strategies are entirely expected by the proposed analysis.

- (17) a. nat-u məts'haf
NAJ-3MS book
b. məts'haf-u
book-POSS.3MS
'his book'

- (18) a. *nat-u wəddi
NAJ-3MS son
b. wədd-u
son-POSS.3MS
'his son'

Part of the problem comes from the fact we don't have an explicit theory of how these forms are generated. But the ideas here, alongside the cooccurrence facts below, may provide some direction:

- (19) *nat-u məts'haf-u
POSS-3MS book-POSS.3MS
'his book of his'

- (20) ni-tesfaj məts'haf-u
DOM-Tesfay book-POSS.3MS
'Tesfay's book / Lit. his book to Tesfay'
